EXPERIENCE

Software Engineer

July 2025 – Present

FPL Technologies (OneCard/OneScore)

Pune, India

- Engineered mission-critical backend services using **Java**, **Micronaut** and **PostgreSQL** for the OneScore platform, serving **3.2 million Monthly Active Users (MAU)**.
- Integrated **Server-Sent Events (SSE) architecture** for real-time data streaming, engineering a high-performance, stable pass-through layer between Agentic AI services and the frontend.
- Architected and engineered a highly scalable, backend-driven framework for **chatbot widgets**, including score simulators and email integrations. Designed a modular system that reduced new widget development time to just 2–3 hours.
- Spearheaded the legacy migration of **CIBIL integration** from SOAP/XML to a modern **REST/JSON API** architecture, improving system maintainability and integration speed.
- Designed and implemented the backend low-level architecture (LLD) for delinquent OneCard debt recovery workflows within a monolithic service, driving a 5% recovery rate and enabling 3,000+ settlements in the first month.
- Resolved a critical state-management issue in the subscription billing cycle, correcting auto-pay cancellation logic to ensure service continuity and prevent premature user churn.
- Collaborated on system design to ensure low-latency data processing within a high-concurrency fintech environment.

Product Development Intern

July 2024 – Jan 2025

Smart Joules

Delhi/Hybrid, India

- Developed data-driven energy management features using **Node.js** and **PostgreSQL**.
- Designed real-time monitoring dashboards in **Grafana** to track system efficiency and hardware health.
- Utilized **DBeaver** for database administration and schema optimization to ensure data consistency.

TECHNICAL PROJECTS

C++ Serialization Engine | C++, Data Structures

- Developed custom serialization logic for complex structures to optimize memory footprint in C++.

RPN Evaluator | C++, Algorithms

- Built a stack-based arithmetic evaluator focused on algorithmic efficiency and robust error handling.

TECHNICAL SKILLS

Languages: Java, JavaScript (Node.js), C++, C, Python, SQL

Frameworks & Libraries: Micronaut, Express.js, JUnit, REST/JSON APIs, Server Sent Events, Data Streaming

Tools & Databases: PostgreSQL, Grafana, DBeaver, Git, Docker, Linux

Core Concepts: Data Structures & Algorithms (DSA), System Design, OOPs, Fintech Infrastructure

EDUCATION

BITS Pilani, Goa Campus

Goa, India

Bachelor of Engineering in Electrical and Electronics Engineering

2021 – 2025

- **Relevant Coursework:** Data Structures & Algorithms, OOPs, DBMS, Operating Systems
